

Purpose & context

George is the developer and operator of **We The People 39120**, a civic engagement app built for Natchez, Mississippi (ZIP 39120). The platform allows citizens to file community issue reports that are routed to their ward's Alderman. The project is in active post-launch growth phase, focused on driving citizen adoption, demonstrating real-world impact, and building accountability pressure on elected officials.

City structure: 6 wards with Aldermen:

- Ward 1: Valencia Hall (vhall@natchez.ms.us)
- Ward 2: Billie Joe Frazier (bfrazier@natchez.ms.us)
- Ward 3: Sarah Carter-Smith (scsmith@natchez.ms.us)
- Ward 4: Felicia Bridgewater-Irving (firving@natchez.ms.us)
- Ward 5: Benjamin Davis (bdavis@natchez.ms.us)
- Ward 6: Curtis Moroney (cmoroney@natchez.ms.us)
- City phone: 601-445-7500

Project details:

- Path: ~/Desktop/Apps/we-the-people-39120
- Stack: Next.js, Supabase, Vercel
- Supabase project ref: fpasmbblciofpbcyfvrk
- Live at: <https://we-the-people-39120.vercel.app>

Current state

- App is live and accumulating real reports. Early signs of real-world impact have emerged (infrastructure fixes potentially attributable to the app), and the City of Natchez has officially acknowledged monitoring the platform.
- Social media growth campaign underway via Facebook, using 4-photo carousel posts built from HTML visual cards with app screenshots.
- Top issue category: Street Issues. Alderman official responses remain at zero — a key narrative lever for public engagement posts.

Key learnings & principles

- **Photo upload / 413 error (resolved):** Vercel's 4.5MB request limit caused freezing on community update photo uploads. Fix applied:
 1. Added `compressImage` function in `ReportForm.tsx` (max 1200px, 0.75 quality, canvas-based compression)
 2. Same compression applied to photo input in `src/app/report/[id]/page.tsx`
 3. `vercel.json` updated with `functions: { maxDuration: 30 }` for reports and comments routes
 4. Added `SELECT` policy on `storage.objects` for the `report-photos` bucket in Supabase

- 5. TypeScript fixes: null checks (`! operator`, `if (!blob) return`), removed deprecated `export const config` from `reports/route.ts`
- **Supabase RLS / `spatial_ref_sys`:** Security warning about this table is a **permanent false positive** from the PostGIS extension — it cannot be modified and requires no action. All app tables (reports, users, profiles, wards, aldermen, etc.) have RLS enabled with correct policies.
- **The bug was on `/api/v1/comments`**, not `/api/v1/reports` — worth remembering for future 413-type issues.

Approach & patterns

- **ATM = "actualiza tu memoria"** — when George writes ATM, Claude should update memory with lessons learned from that conversation to avoid repeating mistakes.
- George expects Claude to retain project paths, config details, and prior context without re-asking.
- Prefers direct diagnosis over exploratory back-and-forth.
- CLI commands should be ready to paste in sequence.
- Facebook post tone: empowering and civic ("constitutional right" framing), English-language, urgency driven by zero official Alderman responses, questions designed to drive comments.

Tell Claude what to remember or forget...
